Abstract of the Invention

A software suite for enabling viewing and manipulation of multiple categories of aggregated data compiled from a plurality of data sources and accessible through a single interface operated on a data-packet-network is provided. The data sources are available for direct network-access through multiple access points available from within the interface. The software suite comprises, a calendar module having at least one display interface for enabling viewing and manipulation of time and date-sensitive calendar data, a transaction module having at least one display interface for enabling viewing and manipulation of financially oriented account data, a portfolio tracking module having at least one display interface for enabling viewing and manipulation of investment oriented account data, a net-worth reporting module having at least one display interface for displaying a solution-oriented net-worth report compiled from the aggregated data, a bill-payment module having at least one display interface for enabling viewing and initiation of payment action regarding current billing data and an account-alert module having at least one display interface for reporting time and event sensitive account alerts related to changes in account data due to occurring events or pre-configured time parameters.
